Ranjbar-Motlagh, Alireza (IR-SHAR)

Isometries of Lipschitz type function spaces. (English summary)

Math. Nachr. **291** (2018), no. 11-12, 1899–1907.

The purpose of this paper is to characterize isometries of Lipschitz spaces under certain conditions. First, the author improves and provides a unified proof of the main results of [J. Araujo-Gomez and L. Dubarbie, *J. Math. Anal. Appl.* **377** (2011), no. 1, 15–29; [MR2754805](#)] and [F. Botelho, R. J. Fleming and J. E. Jamison, *J. Math. Anal. Appl.* **381** (2011), no. 2, 821–832; [MR2802117](#)]. Then, he extends these results to some other function spaces, such as the spaces of vector-valued little maps and pointwise Lipschitz maps. *Elói M. Galego*
